Fargo | Term

Modular by design

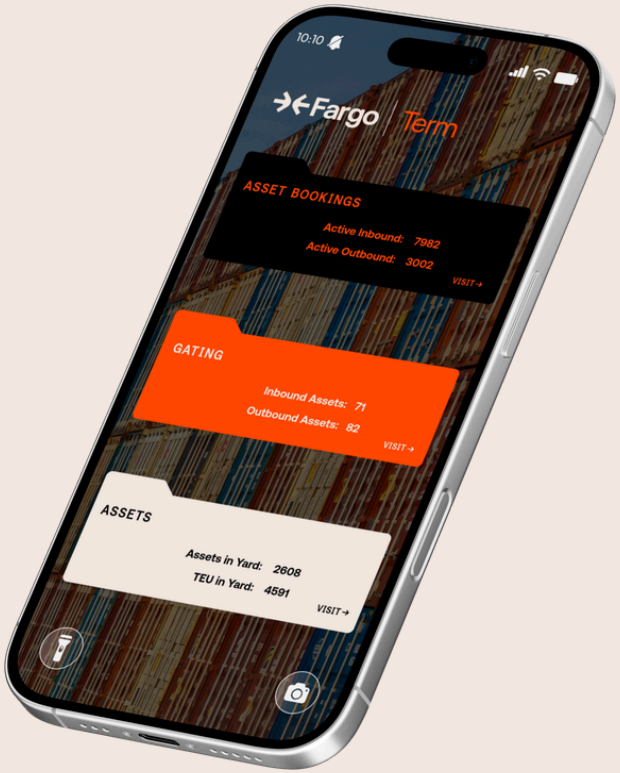

Fargo TERM is built around the operational layers of an intermodal site. Deploy the full platform or configure modules to match your activity – from gate and yard control to rail coordination, depot inventory, and M&R. Transaction-based pricing ensures commercial transparency. At the same time, open APIs enable integration with customers, partners, and wider enterprise systems.

Cloud-native, zero infrastructure

Securely hosted in the cloud using modern web architecture, Fargo TERM removes the need for on-site servers and complex installations. Continuous platform evolution ensures your terminal benefits from ongoing development without operational disruption.

Access anywhere, on any device

From handheld scanners and rugged tablets to full operational workstations, Fargo TERM runs securely in any modern web browser. Yard operatives, gate teams, and M&R inspectors work in real time — reducing radio traffic, improving job allocation, and increasing on-site coordination across single or multiple locations.

Advanced EDI and API connectivity

Connect seamlessly with shipping lines, rail operators, hauliers, and supply chain partners. Fargo TERM accelerates data exchange, automates status updates, and reduces manual input and errors, keeping your operation aligned with industry standards and customer requirements.

End-to-end Maintenance and Repair control

With full CEDEX compatibility and an intuitive graphical interface, Fargo TERM enhances every stage of the M&R workflow. Mobile inspections, digital damage capture, automated estimate creation, and structured customer approval processes make repairs more accurate, faster, and help protect revenue.

Real-time reporting, analytics and operational insights

Access live operational dashboards across one or multiple sites. Monitor gate activity, yard utilisation, rail flows, repair status, and asset performance in seconds. Embedded intelligence highlights bottlenecks and anomalies – enabling proactive performance management and data-led decision-making.
